

# COASTAL TEA TREE

(*Leptospermum laevigatum*)

DATA DETAILS	PRODUCT INFORMATION
<p>The newest member of our Tasmanian native essential oil portfolio is Coastal Tea Tree, a unique variety of the myrtle family <i>Leptospermum</i>. Although it isn't as widely known as its <i>Leptospermum</i> cousins such as Manuka and Lemon Tea Tree, the oil found in its leaves is just as aromatic and effective with many interesting uses.</p> <p>Our Coastal Tea Tree is sourced from wild-crafted stock found in the pristine coastal dune environment of Tasmania's Flinders Island. The leaves and branchlets of this tall bushy shrub are steam-distilled, producing an essential oil that boasts a sweet earthy scent with light woody and citrus tones.</p> <div></div> <p>The essential oil from Coastal Tea Tree has a well-rounded terpene profile due to its composition which contains constituents such as alpha-pinene, eudesmols, limonene and elemol, to name a few. These compounds have a range of beneficial properties including anti-inflammatory, anti-bacterial and anti-viral. Coastal Tea Tree oil is therefore ideal for use in therapeutic settings such as spas and massage rooms, and in aromatherapy applications for overall well-being, reducing stress and improving respiratory function.</p>	<p><b>CAS NUMBER :</b> 2248709-86-4</p> <p><b>BOTANICAL NAME:</b> <i>Leptospermum laevigatum</i></p> <p><b>DESCRIPTION:</b> A unique and aromatic essential oil derived from the <i>Leptospermum laevigatum</i> plant capturing the essence of its native Tasmanian environment.</p> <p><b>AROMA:</b> Sweet and earthy Australian bush aroma with a fresh woody and light citrus background.</p> <p><b>EXTRACTION:</b> Steam-distilled from the freshly cut leaf and branchlets of the <i>Leptospermum laevigatum</i> plant.</p> <p><b>APPLICATIONS:</b> Aromatherapy, fragrance, skincare, personal care.</p> <p><b>VARIANTS:</b> Coastal Tea Tree Oil</p>
